PROFILE SUMMARY

I am a Web Developer and AI/ML Engineer specializing in creating intuitive web applications and intelligent systems. Skilled in React, TypeScript, CSS, Laravel, and machine learning frameworks, I focus on building high-performance, responsive solutions that enhance user experience. I am eager to leverage my comprehensive skill set in a dynamic role where I can contribute to developing innovative, cutting-edge web and AI technologies.

EDUCATION

- Universitas Brawijaya (August 2022 – January 2026)**
Bachelor of Information Technology – GPA: 3.8

WORK EXPERIENCE

PT. Aksamedia Mulia Digital (February 2025 – February 2026)

Full Stack Web Developer (Intern)

- Developed and maintained end-to-end web applications using Laravel and Blade, React.js (Vite.js) for the frontend.
- Developed professional company profile websites, transforming business requirements into high-performance web solutions to enhance digital presence.
- Designed and implemented RESTful APIs to enable seamless communication between frontend and backend systems.
- Built responsive, interactive user interfaces based on provided UI/UX designs.
- Optimized application performance and ensured cross-browser and cross-device compatibility.
- Collaborated closely with designers, QA engineers, and stakeholders to deliver features on time and according to requirements.
- Managed source code with Git and applied CI/CD practices to streamline deployment processes.

PROJECT EXPERIENCES

Maritime Small Object Detection using Enhanced YOLOv11

- Engineered an enhanced YOLOv11 architecture by integrating a Bidirectional Feature Pyramid Network (BiFPN) and Convolutional Block Attention Module (CBAM) for UAV-based maritime object detection.
- Trained and evaluated the model on the SeaDronesSee dataset, improving multi-scale feature representation and background noise filtration to support Search and Rescue (SAR) operations.
- Achieved an mAP50-95 of 0.450 (a 9.2% increase from the baseline) and improved precision to 0.910, significantly reducing the false positive rate.
- Optimized the system to maintain real-time performance, operating at a reliable 60.58 FPS (16.51 ms latency), well above the standard 30 FPS requirement for real-time detection.

Pengembangan Aplikasi Web

- Developed an employee attendance and payroll management web application designed to streamline workforce tracking and salary processing
- Implemented features for real-time attendance tracking, automated payroll calculations, and reporting functionalities.
- Utilized modern web technologies Laravel to ensure a responsive and user-friendly interface, significantly improving efficiency in managing employee records and payroll operations.

POROS Freepass Project

- Developed a Pokémon database web application using Next.js, designed to provide comprehensive data on various Pokémon.
- Implemented features for efficient data retrieval, filtering, and searching, allowing users to access detailed Pokémon information

ORGANIZATION EXPERIENCE

POROS Organization of Open Source

Front-End Developer

- Design and Implement UIs
- Develop Responsive Layouts
- Optimize Performance
- Ensure Cross-Browser Compatibility
- Collaborate with Design Teams

KEY SKILL & COMPETENCIES

Skillset – Communication, Problem-solving, Team Collaboration, Time Management, Adaptability, Attention to Detail, Creativity, Critical Thinking, Empathy, Conflict Resolution.

Toolset – Visual Studio Code, Microsoft Office, Canva, Android Studio, MySQL, Figma, Capcut
